**Installation Instructions 0001-0737-999**

**NOTE:** This product provides a pressure seal only!

**Styles 38, 40, 56, 62, 69, 71, 72, 76, 89, 128, 168**

1. Clean all dirt, rust, oil or loose scale from pipe end. Check surfaces where gasket contacts the pipe to ensure there are no imperfections such as gouges or grooves that will impair the performance of the gasket seal.

2. For couplings, measure back on each pipe end one-half of the middle ring length plus two inches and place a chalk mark. These marks are used for centering the coupling over the joint to be coupled.

3. Slide follower(s) over the pipe end(s).

4. Wipe gaskets clean and lubricate each gasket, pipe O.D. and middle ring flares with soapy water or non-petroleum base lubricant. (Antifreeze should be added in freezing weather).

5. Slide gaskets over each pipe end and assemble the middle ring on one pipe end.

6. Stab other pipe end into middle ring and center coupling between chalk marks. Pipe end must be past the end of the gasket a minimum of one inch after deflection has occurred.

7. Install bolts and hex nuts and draw up finger tight.

8. Tighten nuts on opposite sides drawing up the followers evenly until all nuts have been tightened to the recommended torque below:

   - 3/8" & 1/2" Bolts: 35 Ft. Lbs.
   - 5/8" Bolts: 75 Ft. Lbs.
   - 3/4" Bolts: 90 Ft. Lbs.

   Check torque on all nuts prior to backfilling.

---

**Recommended Laying Deflection per Coupling**

**NOTE:** For products using one gasket, reduce values in half.

---

**WARNING**

When pipe pullout could occur, pipe joint must be anchored. Failure to anchor pipe joint could result in escaping line content and cause property damage, serious injury or death.
